#### **5.5 JARDUERA**

#### 5.5.- Garraio-algoritmoa

#### **Garraio-algoritmoa**

Atal honetan iturburu-puntu baten eta helburu-puntu baten artean garraioa gauzatu ezin daitekeenean jarraitu beharko prozesua garatuko da

#### **5.5.J** Izan bedi ondorengo garrao-kostuen taula:

|            | 1 denda | 2 denda | 3 denda | 4 denda | Eskaintza |
|------------|---------|---------|---------|---------|-----------|
| A biltegia | 5       | 9       | -       | 4       | 28        |
| B biltegia | 6       | 10      | 3       | -       | 32        |
| C biltegia | 4       | 2       | 5       | 7       | 60        |
| Eskaria    | 48      | 29      | 40      | 33      |           |

(1,3) eta (2,4) posizioetako marratxoek iturburu-puntu eta helburu-puntu horien arteko garraioa ezin daitekeela gauzatu adierazten dute.

Hasierako oinarrizko soluzio bideragarria lortzeko Vogel-en metodoa aplikatu eta beharrezkoa bada soluzio optimoa lortzeko Garraio-algoritmoa erabili.
